Sorption and filtration volumes of coals. V. V. Khodot and M. P. Yanovskaya. *Izvest. Akad. Nauk S.S.S.R., Khim. Tver. Tela* 1951, 893-900. — The sorption vol. of coal was detd. by two independent methods, viz., by the method of sorption of methane at high pressures and by the method of sorption of vapors of MeOH at relative vapor pressures up to 0.8. Satisfactory quant. results were obtained. The extent of the pores of coal, detd. by the He method, leads to a sorption vol. of 46 to 60% (av., 55%) and to a filtering vol. of 54 to 40% (av., 45%) of the total pore vol. The expts. made permit one to evaluate the applicability of the equation of subterranean hydraulics to cases of finely porous sorbing media and to give an explanation of the relatively small, but significant porosity, filtering capacity of coal. Gladys S. Macy

Yanovskaya, M.P.

✓ 1122. ADSORPTION OF METHANE AND METHYL ALCOHOL VAPOUR BY COALS.
 Khodot, V.V., Ettinger, I.B., and Yanovskaya, M.P. (Dokl. Akad. Nauk SSSR
 (Rep. Acad. Sci. U.S.S.R.), 1953, vol. 85, 309-311; abstr. in Fuel Abstr.,
 1955, vol. 49, 11903). Adsorption capacity of coals for methane and methyl
 alcohol is determined by the accessibility of micropores and not by the
 dimensions of the crystallites. Hard coals and anthracites (< 35-40%
 volatile constituents) may be regarded as rigid adsorbents. Soft coals
 (40-45% volatile constituents) exhibit an anomalously high adsorption
 ability and cannot be regarded as rigid adsorbents. Experimental techniques
 are those previously described (I.B. Ettinger, Fuel Abstr., 1952, vol. 12,
 2270; Khodot and Yanovskaya, Fuel Abstr., 1952, vol. 11, 91). C.A.

"Method for Checking the Correctness of Determination of the Methane Capacity of Mineral Coals"

Trudy In-ta Gorn. dela AN SSSR 1, 1954, 173-177

The inflexibility of the structure of coals as sorbents of methane develops for brown coals at gas pressures around 30 atmospheres, but for anthracites it is around 800-900 atmospheres. This property of coals makes it difficult to evaluate their methane capacity in laboratory tests. Under natural conditions of the principal coal basins of the USSR, where pressures of CH_4 greater than 52 atmospheres are not observed, metamorphized anthracites appear in most cases as practical rigid sorbents, for which the usual sorptional methods of investigation are convenient. However, some coals reveal inflexibility and therefore require application of special complicated methods of determining the methane content. (RZhGeol, No 6, 1955)

Title : Use of quartz sorption weights for study of sorption capacity of coal at high pressures

Periodical : Dok. AN SSSR 97/5, 879-881, August 11, 1954

Abstract : The construction of a quartz sorption device for the study of sorption characteristics of coal at high pressures is described. The new apparatus is based on the principle of sorption weights which found broad application in the study of sorption characteristics at low pressures. The mode of operation of this device, is explained. One USSR reference (1952). Graphs; drawing.

TITLE:

Flow birefringence in solutions of desoxyribonucleic acid.
I. Optical anisotropy in molecules of native and aggregated
denaturated desoxyribonucleic acid

PERIODICAL:

Vysokomolekulyarnyye soyedineniya, v. 4, no. 5, 1962,
762 - 768

TEXT: The denaturation of desoxyribonucleic acid (DNA) was studied with the aid of flow birefringence. The sodium salt of DNA from the thyroid gland of calf (12.63% N, 7.37% P; N/P = 1.71; E(p) = 6500) was investigated in an optical device with a penumbral compensator (0.0232 λ). Δn and α were determined as functions of the velocity gradient g of the DNA solutions. The relation $(\Delta n / g c \eta_0)_{q \rightarrow 0} = f(c)$ shows that in solutions of native and [7] aggregated denaturated (100°C) DNA, $[n]$ changes by a factor of 115, and by a factor of 16. The optical anisotropy of the DNA macromolecule is

Card 1/3

Flow birefringence in solutions of ...

S/190/62/004/005/022/026
B110/B108

given by $(\Delta n \cdot 27 n_s kT) / [6 \eta_0 (\eta_r - 1) 4 \pi (n_s^2 + 2)^2] = \Theta_j + \Theta_f^*$, where n_s is the refractive index of the solvent, Θ_f is the shape anisotropy at a given concentration of the solution, η_r is the relative viscosity of the solution, and η_0 is the viscosity of the solvent. The anisotropies of the monomer links with adenine thymine and guanine cytosine were calculated according to J. D. Watson and F. H. C. Crick, and found to be $a_{\parallel} - a_{\perp} = -15 \cdot 10^{-24} \text{ cm}^3$. This value points to a considerable rigidity of the DNA molecule. For initial DNA solutions, kept at room temperature and 80, 90, and 100°C, the following values, respectively, were obtained from the equation $\Theta_1 = \gamma_1 - \gamma_2$: $(3/5) (\alpha_1 - \alpha_2) \cdot \Theta_1 \cdot 10^{20} \text{ cm}^3 = -0.90, -0.87, -0.60, -0.12$; $(\alpha_1 - \alpha_2) \cdot 10^{20} \text{ cm}^3 = -1.5, -1.3, -1.0, -0.2$; $S = 1000, 900, 700, 130$; $\Lambda_m = 3400, 3060, 2400, 440 \text{ Å}$; $S = (\alpha_1 - \alpha_2) / (a_{\parallel} - a_{\perp})$, $\Lambda_m = Sb$; $b = 3.4 \text{ Å}$ (length of monomer). A molecular weight of $5 \cdot 10^6$ and a mean radius of inertia of $\sqrt{R^2} = 2 \cdot 10^3 \text{ Å}$ were obtained from the angular distribution of the intensity of light

Card 2/3

Flow birefringence in solutions of ...

S/190/62/004/005/022/026
B110/B108

scattered by native DNA solutions. On the basis of the mean square distance h^2 between the chain ends, the convolution in the native DNA molecule was found to be $Q = L/\sqrt{h^2} \approx 5$. As the lengths of the segments, determined optically and geometrically, differ considerably, further investigations are necessary. There are 3 figures and 1 table. The most important English-language reference is: J. D. Watson, F. H. C. Crick, Nature, 171, 964, 1953.

Title : Findings of brontotheria in the Soviet Union

Periodical : Priroda 114/4, 114 - 115, Apr 1955

Abstract : A description is given of the class of prehistoric mammals called brontotheria. An account is given of the finding in Kazakhstan in 1951 of a part of an upper jaw with teeth from a brontotherium of a new type, epimanteoceras precursor. In 1952 near Vladivostok bones and teeth were found belonging to the type of brontotheria called rhinotitan orientalis. Three references: 2 Soviet and 1 USA (1943 - 1953). Illustrations.

AUTHOR: N.M. Yanovskaya, Candidate of Biological Sciences

TITLE: On the Paleogeographical Distribution and Ways of Settlement of the Brontotheria (O paleogeograficheskom rasprostraneni i putyakh rasseleniya brontoteriyev)

PERIODICAL: Priroda, 1958, Nr 5, pp 99 - 100 (USSR)

ABSTRACT: After an evaluation of the disagreeing views held by foreign, mainly America, scientists on the migrations of the brontotheria, the author proposes the following interpretation: A land divide, the Turgay Strait, unsurmountable for mammals separated Europe from Asia during the Oligocene. Asia was connected with America by the now Bering Strait, while Europe was connected with America by the Atlantic Bridge, now via England, Iceland and Greenland. This explains the similarity of European and American Brontotheria. Further evidence for this hypothesis is still needed. There are 1 map and 6 non-Soviet reference.

TITLE: Synthesis of methylethoxysilanes containing benzoate and terephthalate groups

SOURCE: Zhurnal obshchey khimii, v. 36, no. 10, 1966, 1848-1850

TOPIC TAGS: methylethoxysilane, benzoic acid, ~~ethylene dichloride~~, terephthalic acid, silane, ~~tert-butyl~~ organosilicon compound

ABSTRACT: The five previously unreported organosilicon compounds containing acyloxymethyl groups were obtained by the reaction of potassium benzoate with the corresponding ethoxymethylchloromethylsilanes on heating in the presence of 3.3—3.9 wt% HCl, as a catalyst:

and by the reaction of potassium terephthalate with ethoxydimethylchloromethylsilane in the presence of HCl:

PHASE I BOOK EXPLOITATION

SOV/1366

Istoriko-matematicheskiye issledovaniya, vyp. 11 (Research in Mathematical History, Nr 11) Moscow, Fizmatgiz, 1958. 792 p. 3,000 copies printed.

Eds. (Title page): Rybkin, G.F. and Yushkevich, A.P.; Ed. (Inside book): Konoplyankin, A.A.; Tech. Ed.: Murashova, N. Ya.

PURPOSE: This book is intended for mathematicians and others interested in the history of mathematics, and may serve as the basis for a suitable university text on the history of mathematics, thereby filling the most serious gap in Soviet mathematical literature.

COVERAGE: This book contains reports made by members of the section on the history of mathematics at the Third All-Union Mathematical Congress which discussed problems of the history of mathematics and various articles on the significance of the history of mathematics

Card 1/8

Research in Mathematical History (Cont.)

SOV/1366

for mathematics itself and for the other sciences. There are also four articles on the history of mathematics in Czechoslovakia and Rumania, an article on the investigation of the algebraic roots of differential calculus in connection with a study of the mathematical writings of K. Marx, and an article on the work done on negative numbers by the Arabian mathematician, Abu-l-Wafa. A series of articles on various texts and documents connected with the history of mathematics, including a translation of the treatise De Configuratione Qualitatum by N. Oresme and two articles concerning it, concludes the book.

YANOVSKA, S. A.

AUTHOR: None Given.

24-2-28/28

TITLE: All-Union Conference on the Theory of Relay Systems.
(Vsesoyuznoye soveshchaniye po teorii ustroystv reley-nogo deystviya).

PERIODICAL: Izvestiya Akademii Nauk SSSR, Otdeleniye Tekhnicheskikh Nauk, 1958, No.2, pp. 167-168 (USSR).

ABSTRACT: The Institute of Automation and Telemechanics of the Ac. Sc. USSR (Institut Avtomatiki i Telemekhaniki Akademii Nauk SSSR) convened in October, 1957 an All Union Conference on the theory of relay systems. The aim of the conference was to evaluate the present state of the problem of the theory of relay operation, particularly evaluation of the problems of synthesis, analysis and transformation of the structure of relay equipment, optimum construction and assembly of such structures, automation of the processes of synthesis and analysis of such structures. Over 330 representatives of research establishments, works' laboratories and project organizations from numerous centres of the USSR as well as scientists from Roumania, Hungary and Czechoslovakia participated in the conference.

Card 1/5 In his opening address M. A. Gavrilov reported on the

All-Union Conference on the Theory of Relay Systems. 24-2-28/28

present state and the main trends of development of the theory of relay circuits.

Thirty papers were read including "On the Development of Mathematical Logic and its Engineering Applications" by S. A. Yanovska, "Algebraic Theory of the Operation of Relay-Contact Circuits" by Gr. K. Moisil (Bucharest), "On the Inversion Complexity of a System of Functions" by A. A. Markov, "Minimum Disjunctive Shape of "Bull" Functions" by K. Popovich (Bucharest), "On Certain Mathematical Problems of the Theory of Relay Circuits" by S. V. Yablonskiy.

The technique of operation in this field was dealt with in the following papers: "Technique of Determining the Minimum Number of Relays Necessary for the Construction of a Relay Circuit with Given Conditions of Operation" by V. G. Lazarev; "Matrix Method and Method of Characteristic Functions in the Theory of Contact Circuits" by A.G.Luntz; "On the Theory of Synthesis of Contact Circuits" by F. Svobodin (Prague); "Construction of Relay Circuits with Bridge Connections" by M. A. Gavrilov; "Method of Synthesis of Multi-Pole Relay-Contact Circuits" by V. N. Grebenshchikov; "Application of the Method of

Card 2/5

All-Union Conference on the Theory of Relay Systems. 24-2-28/28

Probability Graphs for the Analysis of Switching Circuits" by A. D. Kharkevich; "Graphical Method of Constructing Relay-Contact Circuits" by Ya. I. Mekler; "On the Algebraic Method of Analysis and Synthesis of Multi-Contact Relay Circuits" by V. I. Shestakov. The following papers dealt with acute topics: "Automation of the Process of the Analysis of Relay Circuits" by P. P. Parkhomenko; "Matrix Analyser of Relay-Contact Circuits" by T. T. Tsukanov; "Mechanisation of the Process of Synthesis of Relay Circuits" by A. A. Arkhangel'ska, V. G. Lazarev and V. N. Roginskiy; "The Szeged Logical Machine and Some of its Applications" by L. Kalmar (Hungary). The participants of the conference arrived at the conclusion that in the field of synthesis of relay equipment the fundamental problem is that of developing a method of determining the most rational structures. Existing methods solve fundamentally the problem of creating a structure of relay equipment in accordance with exactly formulated conditions of operation. However, for complicated relay systems containing a large number of inter-related blocks, the existing methods are quite cumbersome. The problem arises of general

Card 3/5

All-Union Conference on the Theory of Relay Systems. 24-2-28/28

investigation of symbolic recording of the conditions of operation for determining the existing relations and particularly for developing methods of sub-dividing the general sequences into sequences corresponding to the various functions to be fulfilled and synthesis of relay equipment in sections. In some cases, the statistical characteristics of individual connections being occupied has to be taken into consideration. An important problem of the theory of relay systems is that of minimising the size of their structure. In view of the complexity of the structures of modern relay systems it is of great importance to develop automatic machinery for synthesis and analysis of relay apparatus and the first successes achieved in this field were reported on at the Conference. The Institute of Automatics and Telemechanics, Ac.Sc., USSR has developed a universal machine for analysing the structure of relay systems on twenty relay elements which permits solution of a very wide class of problems. In the Computer Institute of the Czechoslovak Ac.Sc. and in the Laboratory of Problems of Wire Communication of the Ac.Sc. USSR, the first machines were built for synthesis

Card 4/5

All-Union Conference on the Theory of Relay Systems. 24-2-28/28

of structures of relay equipment. This work requires further development, particularly as regards machines for the synthesis of structures. The members of the conference pointed out the advisability of organising a coordinating commission relating to work on the theory of relay systems and of establishing an International Federation relating to this problem.

TITLE: Problems in the Theory of Relay Devices (Problemy teorii ustroystv releyevogo deystviya).
All-Union Conference in / Moscow (Vsesoyuznoye soveshchaniye v Moskve).

PERIODICAL: Vestnik AN SSSR, 1958, Vol. 28, Nr 1, pp. 131-132 (USSR).

ABSTRACT: The Institute for Automation and Remote Control AN-USSR convened a Conference which took place from October 3 to October 9 1957. The following problems figured on the agenda: Synthesis, analysis, reconstruction of the relay structure and effect, the best construction and structure, automation of analytical processes, etc. The council was attended by representatives of scientific institutions and industrial firms, as well as by scientists from other countries. The following reports were made:

- 1) A. M. Letov stressed the importance of the part played by relay devices in the automation of the finishing process.
- 2) M. A. Gavrilov characterized the present stage and the main trends of the development of these devices, and said that with respect to works published in this field, the USA and the USSR ranged first, while the Roumanian Peoples' Republic ranged third.
- 3) S. A. Yanovskaya investigated the characteristic features of the

Card 1/1

Problems in the Theory of Relay Devices.
All-Union Conference in Moscow

30-1-36/39

development of mathematical logics as well as the fields of their technical application.

- 4) G. K. Moisil, Regular Member of the Roumanian Academy, stressed the influence exercised by Soviet scientists (V. I. Shehtakov, M. A. Gavrilov) on the development in his country.
- 5) A. A. Markov spoke about the inversion of complicated systems of functions.
- 6) A. Svoboda (Czechoslovakia): His report on certain possibilities of using contact grids was read.
- 7) Yu. A. Bazilevskiy: On temporary logical functions.
- 8) K. Popovich (Roumania) suggested an improved representation of functions.
- 9) A. V. Kuznetsov: On the impossibility of constructing an algebraic apparatus with a finite number of functions.
- 10) S. V. Yablonskiy: On the application of the existing theory for new elements with relay effect.
- 11) T. L. Maistrova: On the application of non-equivocal logics.
- 12) G. K. Moisil: His report on the synthesis of relay schemes was read.
- 13) M. A. Gavrilov: Investigated methods of Constructing bridge circuits.

Card 2/4

Problems in the Theory of Relay Devices.
All-Union Conference in Moscow.

30-1-36/39

- 14) P. Konstantinesku (Roumania): On the method of constructing multipole contacts.
- 15) V. N. Roginskiy: On the graphic method of constructing (I, k) -poles.
- 16) A. D. Kharkevich: On the application of the methods of probability diagrams.
- 17) V. I. Shentakov: On the algebraic method of analysis and synthesis.
- 18) Ya. I. Mekler: On the graphic method of the construction of relay contact schemes.
- 19) V.G. Lazarev: On the method of determining the minimum relay number.
- 20) M. Nedelcu (Roumania): On electronic circuits with relay effect. G. Ivanin.
- 21) L. Kalmar, Corresponding Member of the Hungarian Academy of Science: On the logical Seged machine.
- 22) F. Svoboda (Czechoslovakia): On the working principle of a machine for the synthesis of contact circuits.
- 23) A. A. Arkhangel'skaya: On a machine for the synthesis of contact poles.

Card 3/4

Problems in the Theory of Relay Devices.
All-Union Conference in Moscow.

30-1-36/39

V. G. Lazarev.

V. M. Roginskiy.

- 24) P. P. Parkhomenko. On problems concerning the automation of the analysis of relay schemes.

T. T. Tsukanov.

The extent to which the field of the theory of devices with relay effect has been investigated is described as insufficient. In connection with the council an exhibition of devices and publications dealing with this field was organized.
